

BAGAS ARIA SATIVA

Full-Stack Developer

bagasativa@gmail.com | +62 812-5555-7994 | Bekasi, Jawa Barat | bagasaria93.github.io | linkedin.com/in/bagasaria | github.com/bagasaria93

SUMMARY

Full-Stack Developer with 1+ year of production experience building and shipping an 11-department manufacturing ERP and three HR and booking platforms. Comfortable owning the full cycle from requirements gathering and system analysis through database design, backend architecture, API development, and cloud deployment. Currently pursuing a Master of Computer Science.

EXPERIENCE

Full-Stack Developer

Aug 2025 to Present

PT Ganzu Gisma Seiko | Hybrid | Specializing in ERP & Business Systems

Stack: Laravel 10, PHP, MySQL, Tailwind CSS, Chart.js, ApexCharts, Accurate API, VPS/Hostinger

- Built and shipped a full-stack manufacturing ERP from scratch as the sole developer, now actively used across 11 departments spanning the company's full procure-to-pay and order-to-cash cycle: Sales, Procurement, Warehouse, PPC/MRP, Production, QC, Delivery, Finance (with two-way Accurate accounting integration), Subcontracting, and HRD.
- Designed and implemented a 30-role access control system with staff, supervisor, and manager tiers per department, enforcing department-specific multi-level approval workflows consistently across every transactional module.
- Designing data flows across 11 departments exposed conflicting ownership boundaries and N+1 query problems on high-traffic tables. Resolved by designing a normalized schema across 100+ tables with targeted indexes on frequently queried foreign keys and clear module ownership per department, cutting one high-traffic dashboard query from 21 database calls down to 2.
- Procurement had no visibility into actual material needs, causing over-ordering and stockouts. Built an MRP engine that calculates raw material requirements from active production orders, auto-generates purchase requests, and routes them through a role-based approval workflow per department head.
- Quality incidents were impossible to trace with a single inspection point. Implemented a multi-source QC inspection system (incoming material inspection, in-process production inspection) with state machine transitions and per-batch audit trail across multiple inspection trigger points. Customer orders auto-cascade into delivery documents and invoices with live payment status, eliminating manual re-entry across departments.
- Designed executive and per-module dashboards giving leadership real-time visibility into production, inventory, and financial performance across all departments.
- Independently owned the ERP's full lifecycle for over a year, from architecture decisions and module design to ongoing production support, without dedicated senior engineering oversight.

Project-Based Full-Stack Developer

Jan 2025 to Oct 2025

Rainbrow Sulam Alis | Specializing in HR, Aftercare & Booking Systems

Stack: CodeIgniter 3, PHP, MySQL, Tailwind CSS, REST API, WhatsApp API, AJAX, VPS/Hostinger

- Delivered 3 full-stack business applications concurrently as a 2-person team alongside the HRD Supervisor, with no prior system infrastructure, all completed 14% ahead of schedule.
- HRIS (CodeIgniter 3, MySQL, Tailwind CSS): HR processes ran on manual, disconnected workflows with no attendance location verification. Built a company-wide Human Resource Information System covering employee management, recruitment, performance management, leave management, and payroll, with GPS-based attendance (server-side geofencing validation), automated training scheduling with completion tracking, an HR analytics dashboard, and RBAC separating admin, manager, and staff access.
- Aftercare Dashboard (CodeIgniter 3, MySQL, WhatsApp API): low customer ratings went unaddressed with no monitoring. Built a multi-role complaint workflow with state transitions (open, in-progress, resolved), WhatsApp API bulk messaging, and a configurable low-rating trigger that auto-escalates unresolved complaints.
- NailShade Booking System (CodeIgniter 3, MySQL, QR Code, WhatsApp API): walk-in traffic caused scheduling conflicts and post-session feedback was ad hoc. Built an end-to-end booking platform with QR-code walk-in check-in, automated WhatsApp feedback dispatch, therapist performance leaderboard, and branch-level comparison analytics.
- All three apps share a consistent RESTful API consumed via AJAX for real-time operations, with RBAC enforced on all sensitive HR and financial endpoints.
- Result: aftercare response rate +85%, recruitment processing time -80%, customer rating collection from 20% to 78%.

IT Support Intern

Nov 2023 to Jan 2024

PT Komatsu Undercarriage Indonesia | On-Site | Heavy Industry

Stack: Alpha Anywhere, SQL

- Implemented form logic and data binding for the Delivery Note Module in Alpha Anywhere, streamlining logistics documentation workflows.
- Researched and designed a Web-Based Shipment Monitoring Application, producing a system design document covering ERD, database schema, and logistics process mapping.
- Supported IT operations including hardware maintenance, network troubleshooting, and system deployment assistance.

ACHIEVEMENT CERTIFICATES

NailShade App Development | Rainbrow Sulam Alis

2025

- Goal: Digitize the full customer journey from walk-in booking to post-session feedback collection.
- Impact: Customer rating collection from 20% to 78%. Aftercare response rate improved by 85%.

Rainbrow Management System | Rainbrow Sulam Alis

2025

- Goal: Replace manual HR and operational processes with an integrated multi-application management system.
- Impact: Recruitment processing time cut by 80%. GPS-based attendance eliminated manual record manipulation.

COLLABORATIVE PROJECTS

Class E-Learning Platform

2026

Stack: CodeIgniter 4, PHP, MySQL

- Built a dedicated e-learning platform for classmates within the same program at Universitas Esa Unggul, covering course material distribution, assignment submission, and progress tracking. Designed and deployed to address the lack of a centralized learning resource for the class.

Role-Based Image Storage Platform

2026

Stack: Laravel 11, PHP, MySQL

- Built a web-based image storage system with multi-role access control separating admin and regular user permissions. Features include upload management, CDN URL generation, and user administration.

SKILLS

Primary: Laravel (v9 to v12), CodeIgniter 3 & 4, PHP, MySQL, JavaScript, Tailwind CSS, REST API, AJAX, Git & GitHub, VPS/Hostinger

Familiar: Python, TypeScript, React, Next.js, Vue.js, Node.js, PostgreSQL, Bootstrap, Chart.js, ApexCharts, jQuery, GitHub Actions, Vercel, Railway

Specializations: ERP development, POS applications, admin dashboards, system analysis, requirements gathering

Tools: Figma, Canva, Adobe Photoshop, Anthropic API

Languages Spoken: Indonesian (native), English (TOEFL 590)

EDUCATION

Universitas Esa Unggul

2026 to Present

Master of Computer Science (S2)

GPA: 3.85/4.00 (after 1st semester)

Universitas Bina Sarana Informatika

2020 to 2025

Bachelor of Information Technology

Thesis: Web-Based Payroll Information System Using CodeIgniter 3 and Waterfall SDLC to Improve HR Operational Efficiency at PT Beauty Abadi Utama

GPA 3.95 / 4.00, Cum Laude

Final year focused on undergraduate thesis completion (2024 to 2025)

CERTIFICATIONS

- PHP Certificate, Beginner to Advanced (Udemy) - **2024**
- Front-End Web Development (Coding Studio) - **2024**
- Internship Completion (PT Komatsu Undercarriage Indonesia) - **2024**
